PROFILE

I'm a self-taught full-stack software developer. I code with Python in backend; with Django framework, and other micro frameworks such as Flask. I am experienced in AsyncIO which is a Python equivalent of non-blocking servers such as NodeJS. In frontend, I worked with many libraries and state management tools.

EXPERIENCES

Contractor — Graph-Commons — 2021-Present

Graph-commons is a platform that allows you to transform your data into interactive maps. I have been contributing to the project as a community member. Currently I take a role on the migration of a legacy Backbone.js like structured frontend into React.

Resource Manager & Senior Software Engineer — EPAM Systems — 2020-2021

I was responsible for the UI development of an embedded smart-tv application. I mainly worked on the networking interface of the application. It is a NodeJS application that using Wayland compositor to interact with the backend services.

Lead Software Engineer — EPAM Systems — 2017-2019

I mainly worked on development of an interactive map for a seat selection in a ticket-selling web site. I worked with React and GraphQL.

Software Developer — Adphorus — 2016-2017

I worked on the development of the UI with React and Redux. Basically the tool allows you to create an ad and publish it on several platforms such as Facebook and Twitter. I was working closely with the Product team to provide users an abstract interface which works for all the platforms.

Software Developer—Hipo — 2014-2015

I worked on the application chroma; which is an attribution editor for collection items and natural species. I worked as a full-stack developer. Backend system built with Python and Tornado web framework and running on AWS. The frontend and the attribution editor is built with AngularJS.

Senior Developer & Community Manager—Metglobal — 2013-2014

Metglobal is a leading travel-tech company in Turkey. I was responsible for the development travel websites and hotel search engines. I lead the development community and initiated a software development and research lab in the company.

Software Developer—Hipo — 2012-2013

I developed a RESTful APIs for location-based IOS applications. Mainly worked with Django and PostgreSQL. I also implemented an oAuth endpoints for the transition between IOS applications and their web versions.

Software Developer — Tacirnet — 2010-2012

Tacirnet is a SAAS e-commerce provider. I was responsible for development of admin interface of e-commerce application. I worked with Django.

EDUCATION

Istanbul University — Sociology — Not finished.
